➤ **Global-Local Intelligent DICT Service Partner**

Business VC Meeting Through Smart Devices is Now Possible

A Good Start for Better Technology

Enterprises enjoy uncompromised SmartCLOUD™ VC experience from simplified pricing for multi-point, telepresence-quality video conferencing services that allow subscribers to conference with anyone with a mobile device, PC, conference room system, or even a legacy end-point system.

Web-based Service Portal

Single-click portal initiates online meetings from anywhere, anytime.

Speed and Precision Guaranteed

SmartCLOUD™ VC service separates video stream into low and high reliability channels and integrates different network environment to maximize quality and great interactive experience between the endpoints. As a VC Cloud platform, the packet switching is handled with optimal efficiency without degrading the quality of the video or adding noticeable latency. The highly versatile service supports simultaneous multi-session, multi-point conferences with minimal delay – up to 5 times faster than traditional video conferencing services.

HD Multi-party VC on Mobile Devices

Employees are able to join VC with other mobile endpoints, desktops, room systems or laptops from anywhere, at any time and from the tablets and smart phones, delivering up to 720p HD resolution with shared content viewing capability on the go.

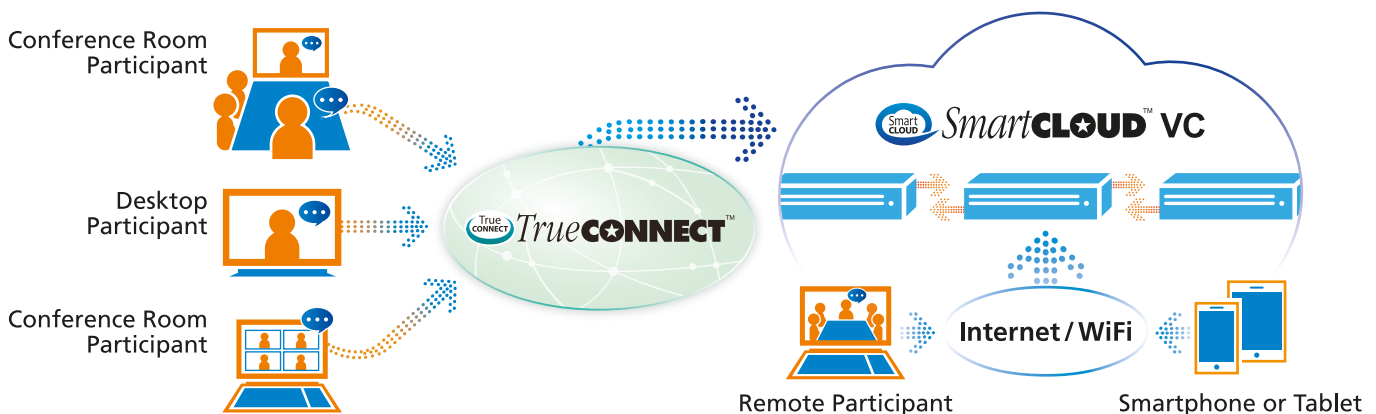

Latest Video Conferencing Standard

Leveraging advanced VC codec Scalable Video Coding (SVC)-based compression technology, blurry images and broken pictures are history. Running its high quality on 720p or VGA quality (640 x360) video to the desktop, where VGA is 4 times sharper than conventional CIF resolution (352x288).

24 x 7 Round-the-clock Support

With SmartCLOUD™ VC service, users can easily connect with customers and external partners to resolve any business issues that may arise. User-friendly interface and multi-lingual settings also add an extra level of convenience. SmartCLOUD™ VC service is well managed and further supported by CITIC Telecom CPC's world-class data centers which guarantee ample bandwidth. 24 x 7 service monitoring and hotline support services are provided to ensure customers satisfaction as well.
