

Information Assessment Service

Vulnerability Management Solution For Preemptive And Cost-effective Protection Against Security Threats

Vulnerability management is an on-going process that helps preventing unauthorized access of your valuable data, customer information, critical network assets and intellectual property from your network infrastructure. With the rapid increase of IP usage, networks become businesses' vital infrastructure that would greatly affect operations. To ensure networks are running smoothly and data is securely managed, **TrustCSI™ IAS** is designed for enterprises to identify potentially damaging vulnerabilities in their network infrastructure and web applications, with penetration test service reports and recommendations for them to take immediate remedy actions.

HIGHLIGHTS

- The service is fully managed by experienced IT security specialists
- Comprehensive assessment to minimize the risk of non-compliance
- Proactive identification and prioritization of risks to prevent possible threats
- Comprehensive reports with actionable recommendations
- Optional re-audit services to verify client's risk remediation actions

> **Global-Local Intelligent DICT Service Partner**

TrustCSI™ IAS holistic vulnerability assessment

TrustCSI™ IAS provides full assessment to enterprises' entire IT network, which include:

- 
Vulnerability Assessment | Identify and prioritize risks in the network infrastructure
- 
Network Equipment Policy Assessment | Ensure the highest level of network protection and performance through the policy review
- 
Web Application Assessment | Identify potential or realized threats arisen from inadvertent mis-configuration, weak authentication, insufficient error handling and sensitive information leakage etc
- 
Network Infrastructure Design Assessment | Evaluate and improve the network design for meeting the set IT objectives

4-tiered approach for effective vulnerability management

Thoughtful service planning

Prior to the service, CITIC Telecom CPC's certified security professionals will discuss with customers on service schedule and scope of assessment to ensure the TrustCSI™ IAS service is customized to meet with their business requirements.

Comprehensive risk assessment

Powered by industry leading vulnerability management tool with the most comprehensive vulnerability knowledge base, TrustCSI™ IAS solution will assess web applications, network equipment and IT infrastructure to identify all security vulnerabilities and risk levels.

Infrastructer Vulnerability Assessment

A detailed report with risk ratings, description of security threats and consequences if the vulnerability is exploited will be given. CITIC Telecom CPC security experts will also present the findings and provide risk remediation recommendations to customers.

Re-auditing

To ensure customer's risk remediation actions are effective and to address new attacks or vulnerabilities created under the changes of IT infrastructure, CITIC Telecom CPC can carry out optional re-audit services.
