

## ➤ The CITIC Telecom CPC TrustCSI™ Device Management Service portfolio:

### Unified Threat Management (UTM)

TrustCSI™ UTM delivers front-line protection with multiple layers of enterprise protection to defend against traditional and new advanced threats. The optional TrustCSI™ UTM NFV, a software based virtual appliance, helps SmartCLOUD™ customers accelerate service provisioning lead-time (compared to a traditional hardware-based UTM).

### Managed Web Application Firewall (WAF)

TrustCSI™ WAF dynamically secures online resources and instantly arrests a variety of highly damaging Web application attacks. These include cross-site scripting (XSS), SQL injection (SQLi), and cross-site request forgery (CSRF).

### Managed Next-Generation Firewall (NGFW)

TrustCSI™ NGFW is a Next-Generation Firewall solution combined with sophisticated managed security services to deliver round-the-clock non-stop real-time enterprise defense, comprehensively protecting organizations at every level, from network ports to user-based measures.

Optimize security device management to  
maximize your enterprise security fabric

## Comprehensive and reliable device management service to optimize your security technology infrastructure

Safe, pervasive, and reliable network access is the key to a robust enterprise security fabric. Yet even the best designed protection measures are vulnerable to an often overlooked loophole: Outdated security software and unmanaged devices. CITIC Telecom CPC understands your in-house IT teams are busy, and may not have the time or attention to focus on time-consuming, tedious and error-prone manual checking of every device regularly. But just one misconfiguration or missed update can be exploited by attackers and malware, resulting in huge costs to business and reputation, and even non-compliance penalties.

To address all these issues, CITIC Telecom CPC created **TrustCSI™ Device Management Service**, a professional, comprehensive and reliable infrastructure management service to handle the crucial burden of regular diligent device and software management. Let our experts manage and optimize your security technology infrastructure, closing device and software security loopholes. Our ManagedCONNECT portal also provides user-friendly reporting services and 24x7 support, simplifying the entire process and freeing your IT teams to focus on more productive tasks.

### Professional Security Systems Design

Comprehensive design is the key to effective protection, and our certified world-class IT security professionals will work with your team to create and operate a device management system optimized for your enterprise IT environment. This encompasses your organization's firewalls, UTM, IDPS, web proxies, security policies and signatures, all to guard against internal and external threats and adhere to compliance requirements.

### Top Technologies and Best Practice

CITIC Telecom CPC has an extensive history working on cutting edge technologies and partnering with the world's leading security vendors. Our teams of IT professionals are well versed in a broad range of products and services, core technologies, and enterprise security best practices. With TrustCSI™ Device Management Service, your organization enjoys all the benefits of this world-class expertise, without the staffing overhead.

## Six powerful device management services from round-the-clock monitoring to detailed reporting by top-notch professionals

### Top Notch Implementation

Our security professionals handle every aspect of design, implementation, configuration, and other tasks, with superb expertise and best practices.

### Round-the-clock Comprehensive Monitoring

CITIC Telecom CPC's self-owned and self-operated Security Operation Centers (SOCs) provide 24x7 monitoring for your peace of mind. This continuous awareness covers all devices and all network traffic, with our staff alerting you to unusual incidents, offering expert recommendations and helping to undertake proactive remediation.

### Non-stop Device Security Management

Security professionals staffed at our SOC's will diligently undertake long-term security tasks to protect your enterprise, including daily configuration backups, security logging, configurations adjustments, troubleshooting, and more.

### Broad Product Range Expertise

TrustCSI™ Device Management Service covers a wide range of security devices including many brands of firewall, UTM, WAF and other security products.

### Regular and Disciplined Updates

You can focus on your core business tasks and competencies, rest assured that our security professionals will regularly handle updates to your operating systems and software applications.

### Detailed Periodic Reporting

Effortlessly gain visibility into the ongoing performance and progress of TrustCSI™ Device Management Service with weekly and monthly customized security reports, including device status histories, security incidents, and other aspects, plus any expert recommendations to fine-tune your security posture.
