

## **Pay-as-you-go DDoS Protect service for Enterprises in Tallinn**

*DIA PROTECT safeguards your business against reputational and financial loss*

**Estonia, 05th April 2022** - CITIC Telecom CPC Estonia OÜ launches new service portfolio “**DIA PROTECT**”, of which **DIA DDoS Protect** provides advanced networking and security in a single unified offering to organizations seeking to secure and enhance business operations. **DIA DDoS Protect** combines High-Speed Direct Internet Access (DIA) solution and industry-leading DDoS protection to deliver cost-effective connectivity and mitigate cyber risks. **DIA DDoS Protect** is built on the pay-as-you-go method: pay for the DDoS protection service only for the time being under attack. CITIC Telecom CPC offers an approach that is based on real need, the company only pays for the service when being under cyber attack. Service includes a default 15 minutes free of charge DDoS protection per month.

“According to the Republic of Estonia Information System Authority, the number of distributed denial-of-service (DDoS) attacks grew last year, newly coupled with blackmail. Unfortunately, DDoS as a service is available on the dark web and almost anybody can launch a DDoS attack against any company. This can paralyze any company’s everyday work for hours, weeks, or months. Seeing, that the issue is continuously growing, and affects companies randomly, we decided to launch value-added service based on the pay-as-you-go model,” says Serve Bunnik, the Deputy Director of CITIC Telecom CPC Europe operations.

CITIC Telecom CPC’s new service **DIA DDoS Protect** protects the Internet connection for the full range of DDoS attacks: providing ISO 3–7-layer protection, a globally distributed network of cleaning centers ensures effective mitigation of the DDoS attack, as close to the source as possible. Standard supported speed of the Internet connection is up to 1Gbps, which case by case basis can be extended to 10 Gbps. High speed, quality, global Internet connectivity is based on strong local and global Tier 1 and Tier 2 peering, including 8 public IP addresses (minimum) running up to 64 IP addresses, depending on Internet access speed. CITIC Telecom CPC has 24/7 excellent local support in Estonian, Russian or English languages. Service can be extended with optional Security Services to protect businesses from internal and external threats, keeping unauthorized traffic from entering the organization, based on next-generation firewall and anti-virus services.

Distributed denial-of-service (DDoS) attacks are among the most significant security concerns facing customers who rely on cloud-based applications, especially with a new normal business model today. CITIC Telecom CPC’s **DIA DDoS Protect** with DDoS solution provides additional mitigation capabilities and features with network resources, with NO CAPEX and LOW OPEX per usage.
