

CITIC TELECOM CPC

The graphic features a large padlock icon on the right, composed of a wireframe mesh. A circular path of icons surrounds the central text, including a network diagram, a computer monitor, an envelope, a document, a list, a cloud, gears, and a server rack. The background is a dark blue space with a network of glowing nodes and lines at the bottom.

Your trusted ICT solution partner

Your Security is Our Top Priority

High profile breaches are on the rise. Online communities are becoming more aware and additional compliance requirements make IT security everyone's top priority. CITIC Telecom CPC TrustCSI™ Managed Security Services, complementing multiple Security Operations Centers (SOCs) with high availability and disaster recovery functionality, are designed to help you handle these increasing IT security demands effectively. Based on ISO27001 certified processes, we provide robust 24 x 7 monitoring and help businesses identify and analyze vulnerabilities, prioritize threats as well as refine security policies and processes.

Your Total Peace of Mind Protection Solution

Based on businesses' centralized IT security policy, CITIC Telecom CPC's TrustCSI™ MSS are customized to offer full prevention, detection and correction, as well as real-time alert services on a 24x7 basis for meeting enterprises' specific information security needs. When real threats are detected, our security team provides speedy incident response and action to stop these intrusions. Our services enable customers to measure the effectiveness of their implemented solutions by helping to enforce security policies and keep their infrastructure in an optimal state.

Prevention

To maintain the customers infrastructure in an ideal state by monitoring any violation of security policies and alerting them when a known vulnerability affects them

Detection

To identify and respond to security incidents in real time

Correction

To identify, analyze and remedy undesired modifications to systems, devices and applications

A Proven Managed Security Services Provider (MSSP) in Asia Pacific

CITIC Telecom CPC is one of the leading MSSPs in Asia Pacific region, and offers a full portfolio of Managed Security Services (MSS) to enterprises that require total protection solutions, which includes powerful security technology, accurate threat intelligence, proven processes and security expertise - all of which can be customized to match the unique needs of the business.

➤ Dedicated Team of Security Professionals

Striving for service excellence, CITIC Telecom CPC security professionals are 100% certified with international security programs such as CISA, CISSP and CompTIA Security+. With CITIC Telecom CPC, organizations have access to the most skillful security experts in APAC region, certified in a wide range of technologies.

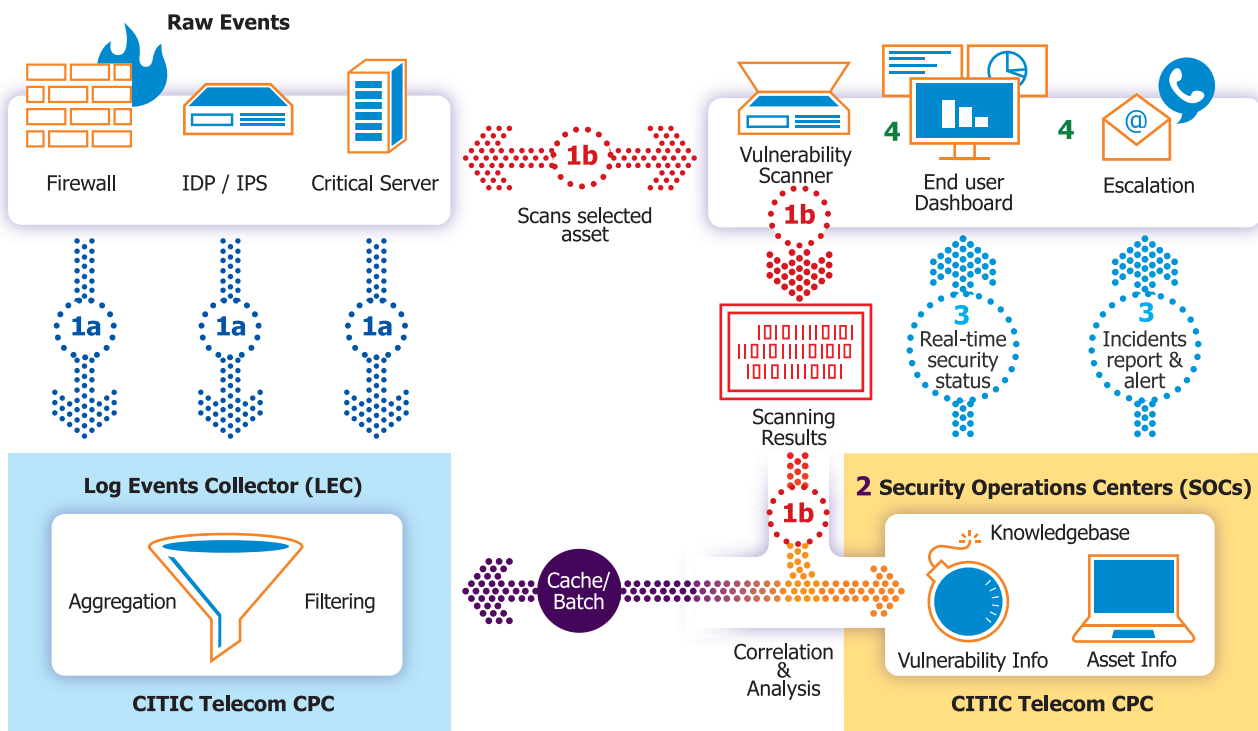

➤ World-class Security Operations Centers (SOCs)

CITIC Telecom CPC's SOC's are certified with a series of international certifications include ISO9001, ISO14001, ISO20000, ISO27017 and ISO27001 Information Security Management System, as well as complied with ITIL processes, ensuring TrustCSI™ MSS brings consistency in the way that threats and policies are handled in the best industry practice.

➤ Advanced Security Information and Event Management (SIEM) Technology

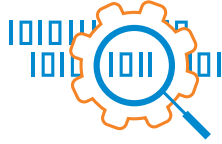

TrustCSI™ MSS is built on a state-of-the-art correlation and classification SIEM engine. We trace billions of events daily and identify real threats timely and accurately for quick remediation actions, greatly reducing businesses' time on analyzing and correlating the security logs.

SIEM Log Correlation and Classification Technology

- 1a. Raw event logs will be sent to CITIC Telecom CPC LEC for Filtering and Aggregation. They will then be passed to CITIC Telecom CPC SOC's.
- 1b. The Vulnerability Scanner will scan the selected assets periodically and deliver the scanning results which will be stored in the knowledgebase.
2. CITIC Telecom CPC SOC's will then make use of the SIEM (Security Information and Event Management) engine for the correlation and analysis between the meta-log and the knowledgebase. The correlated results will be classified in the appropriate category and attributed a risk level.
3. If CITIC Telecom CPC's security specialists in the SOC's find out that the severity of the correlated event is higher than the level agreed with customers, they will activate the incident response mechanism. Customers can get a full picture on their security status through the dashboard.
4. Through the online TrustCSI™ MSS portal, customers not only obtain the latest RSS news feed all over the world, but also get a full picture on their security status in real time, including detailed security event handling information.
